teste: JOAQUIM SILVERIO MESTRE

```
# Load input PDF file
    document = Document("Test.pdf")

    # Loop through each page
    for page in document.Pages:
        # Create a new Document class object to split PDF pages
        splitPDF = new Document()

        # Add current page to the document
        splitPDF.Pages.Add(page)

        # Save current page as a seprate PDF
        splitPDF.Save("Page number " + page.Number + ".pdf")

    print("Done")
```
